

Silk-screen printed glass

What is silk-screen printed glass?

Silk-screen printed glass is a type of toughened safety glass that can be colour-coated or patterned. The glass is transformed into safety glass through a toughening process, wherein the surface of the glass is coated with paint. This also makes the glass highly resistant to thermal stresses.

Where can I use silk-screen printed glass?

Silk-screen printed glass is available in a wide variety of patterns and colours, which makes it suitable for use in both interior design and exterior façades. Typical areas of application are glass partition walls and doors, exterior façades, roofs, etc.

Technical details

Silk-screen printing can be used on all unprocessed float glass surfaces between 4 and 12 mm.
